DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The remains of the Patterson Viaduct stand on the east (Baltimore County) and west (Howard County) banks of the Patapsco River just south of the present bridge carrying the Baltimore and Ohio Railroad over the river near Ilchester, Maryland.

A description of the then new Viaduct taken from the 1829 annual report of the Railroad is as follows:

This bridge rises about 43 feet above its foundations. It has four graduated arches - 2 of 55 foot chord each and two of 20 foot chord each. The smaller arches were introduced for the accommodation of two county roadways, one on each side of the river. Each of the roadways is secured against the action of the stream by substantial guardwalls of suitable length and height. Its length is upwards of 360 feet. The stones in the arches, as in the Carrollton and other bridges, are so shaped as to conform to the radii of circles of which the arches are segments. The versed sines of the larger arches are 16 and of the smaller arches 6 feet. The mass[ive] blocks of granite, some of which exceed 7 tons weight, which form the exterior of its walls, are regularly butted and vertically jointed. Its exterior is undressed or rustic. It contains 9601-1/2 perches of masonry. It was commenced in May and passed in the succeeding December. Its cost was \$35,552.85, or \$3.71 a perch.

The Viaduct was almost totally destroyed in the great Patapsco Valley flood of 1868. A single-span Bollman truss built into the west abutment in 1869 incorporated the original roadway arch and upstream wingwall. With the realignment of the railroad 400 feet upstream in 1902-1903, the Bollman bridge was left unused. Today, all that remains at the original crossing is the single masonry roadway arch of the 1829 construction on the west bank and the stone abutment on the east bank.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

The Patterson Viaduct (or Ilchester Bridge), built from May to December 1829, was part of the original main line of the Baltimore and Ohio Railroad. It was constructed in the first building phase of the Railroad which extended from Baltimore City to Ellicott's Mills. The Patterson, the third bridge to be built for the B & O, is similar in construction to the Carrollton Viaduct (National Register). Designed by Caspar Wever, it was built under the supervision of John McCartney, one of his assistants. A note from McCartney to Wever dated 17 October 1829 reads as follows:

I will contract to build the Bridge over the petapsico for forty five thousand dollars and no Less and Run All Risks & yet i am willing to Cary it on in the Same maner that i have comenced and for what Compancation the presidint and directors of the Company Says is Right yet i am of the opinion that it will not cost more than from thirty to thirty five thousand dolls.¹

McCartney received the contract to build the Thomas Viaduct (National Register) as a result of his successful completion of the Patterson contract.
